

SMART CONSTRUCTION FOR YOUR PROJECT

When you have a partner every
step of the way, anything is possible!

www.3ablock.com

What are the benefits for my business?

You can maximise the use of waste concrete from the mixer, save on crushing costs, and produce high-quality concrete blocks. Do you know why our product's demand is growing so fast? Because the construction process with our technology and products saves time and money. Our solution are ideal for building dividing and retaining walls in various sectors, such as recycling, agriculture and for constructing warehouses and outbuildings.

Block shape

Interlocking concrete blocks are modular blocks designed to connect like Lego® pieces, without the need for mortar. Their interlocking design provides stability, making them ideal for building walls, retaining structures or buildings. These blocks offer flexibility, easy assembly and can be used for both permanent and temporary structures in construction and landscaping projects.

Why 3A Block?

Because we offer you:

- A unique variety of more than 120 models of concrete block moulds.
- More than 150 additional accessories to help you in the casting of concrete blocks | Best value for your money.
- Direct worldwide delivery from the manufacturer and logistical support | Strength and durability of our moulds, proven over time.
- Precision and accuracy in casting concrete blocks with our forms. Thanks to our 3-tier internal production process, quality assurance system, we guarantee consistency and accuracy in the geometry of the moulds we produce. This is important in order to ensure the consistency and accuracy in the dimensions of the concrete blocks, that you will produce with our moulds.

We've also considered other solutions for your convenience.

We offer 120 models in different sizes, more than 150 additional accessories and a capacity of 12,000 units per year. Our modern and automated production factory is one of the largest and most advanced in the world.

L shape

L-shaped retaining walls made from concrete blocks are designed to support and retain soil or other materials on one side, while the other side remains open. The L shape block offers stability, with the horizontal base acting as a strong foundation to resist pressure from the retained material. These walls are frequently used in landscaping, construction and civil engineering projects due to their structural strength and versatility.

Slab shape

Concrete slab plates are large, flat blocks typically used for creating stable surfaces, such as roads, construction sites and temporary pathways. They are available in various sizes. Slab plates are easy to install and offer a long-lasting solution for both permanent and temporary projects in construction and infrastructure development.

Road Barrier

Road barriers are modular concrete blocks used to separate lanes of traffic, or to protect construction zones. Their design ensures stability and they are often used to prevent vehicles from crossing into opposing lanes or off-road areas. Road barriers are commonly used in both permanent and temporary usage, providing safety and traffic control in both construction sites and urban environment.
